

Getting SLURM job information

The following commands will be useful, and for full details please refer to the documentation at <http://slurm.schedmd.com>

squeue - view information about jobs located in the SLURM scheduling queue.

e.g. to list all jobs in the dedicated SeeD partition (queue)

```
squeue -p tgac-seed
```

sstat - Display various status information of a running job/step.

sacct - displays accounting data for all jobs and job steps in the SLURM job accounting log or SLURM database
